## **Page Plus Cellular Offers WAP Wireless Internet Service; BREW Coming Soon**

### Prepaid Cellular Phone Provider Continues to Expand Services

*Holland, OH, February 27, 2009* - Prepaid cellular phone service provider [Page Plus Cellular](#) has expanded its service offerings to include Wireless Application Protocol ([WAP](#)), also known as "Wireless Internet," "Wireless Web," or "Mobile Web." Wireless Internet can be used to view email, news, weather, and to download internet contents. This feature is available on select Page Plus handsets which contain mini-browser software that allows the user to navigate various services on the Internet, which are viewed on the phone display. The charge for the service is \$1.20 per megabyte transferred.

Page Plus also announced it will soon offer [BREW](#) (Binary Runtime Environment for Wireless), a software platform created by Qualcomm that provides a comprehensive, industry-proven solution for the development and delivery of advanced wireless data across virtually every media category. Applications include everything from full-track music, ringtones and wallpapers to streaming audio, video, navigation and games. BREW will be available in May of this year.

[Page Plus Cellular](#) is a nationwide prepaid cellular service provider which offers smart, simple and convenient rate plans with the flexibility to suit customers' needs. Page Plus offers low rates, exceptional customer service, and the superior coverage area of a leading network service provider. Prepaid Reviews ranks Page Plus Cellular second overall among all prepaid providers. Page Plus Cellular handsets and airtime are available through its large national network of [dealers](#), and on its website at [www.pagepluscellular.com](http://www.pagepluscellular.com).
