Important Safety Precautions

Read these simple guidelines. Breaking the rules may be dangerous or illegal. Further detailed information is given in this user quide.

Violation of the instructions may cause serious injury or death.

 Never use an unapproved battery since this could damage the phone and/or battery and could cause the battery to explode.

Never place your phone in a microwave oven as it will cause the battery to explode.

Do not dispose of your battery by fire or with hazardous or flammable materials.

 Make sure that no sharp-edged items such as animal's teeth, nails, come into contact with the battery. There is a risk of this causing a fire.

 Be careful that children do not swallow any parts such as rubber plugs (earphone, connection parts of the phone, etc.). This could cause asphyxiation or suffocation.

Important Safety Precautions

Unplug the power cord and charger during lightning storms to avoid electric shock or fire.

 When riding in a car, do not leave your phone or set up the hands-free kit near the air bag. If wireless equipment is improperly installed and the air bag is activated, you may be seriously injured.

Do not use the phone in areas where its use is prohibited. (For example, aircraft).

 Do not expose the battery charger or adapter to direct sunlight or use it in places with high humidity, such as a bathroom.

• Never store your phone in temperatures less than -4°F or greater than 122°F.

 Do not use harsh chemicals (such as alcohol, benzene, thinners, etc.) or detergents to clean your phone. There is a risk of this causing a fire.

Do not drop, strike, or shake your phone severely. Such actions may harm the internal circuit boards
of the phone.

Do not damage the power cord by bending, twisting, pulling, or heating. Do not use the plug if it is loose
as it may cause electric shock or fire.

- Do not place any heavy items on the power cord. Do not allow the power cord to be crimped as it may
 cause electric shock or fire.
- Do not handle the phone with wet hands while it is being charged. It may cause an electric shock or seriously damage your phone.

- Do not disassemble the phone.
- Do not place or answer calls while charging the phone as it may short-circuit the phone and/or cause electric shock or fire.

- Only use the batteries, antennas, and chargers provided by LG. The warranty will not be applied to products provided by other suppliers.
- Only authorized personnel should service the phone and its accessories. Faulty installation or service may result in accidents and consequently invalidate the warranty.

• Do not hold or let the antenna come in contact with your body during a call.

An emergency call can be made only within a service area. For an emergency call, make sure that you
are within a service area and that the phone is turned on.

Thank you for choosing the advanced and compact VX8100 cellular phone, designed to operate with the latest digital mobile communication technology, Code Division Multiple Access (CDMA). Along with the many advanced features of the CDMA system, such as greatly enhanced voice clarity, this phone offers:

- Large, easy-to-read, 8-line backlight LCD with status icons.
- Paging, messaging, Voicemail, and caller ID.
- 27-key keypad.
- Long battery standby and talk time.
- Menu-driven interface with prompts for easy operation and configuration.
- Any key answer, auto answer, auto retry, one-touch and speed dialing with 99 memory locations.
- Bilingual (English and Spanish) capabilities.

Important Information

This user's guide provides important information on the use and operation of your phone. Please read all the information carefully prior to using the phone, for the best performance and to prevent any damage to or misuse of the phone. Any unapproved changes or modifications will void your warranty.

FCC Part 15 Class B Compliance

This device and its accessories comply with part 15 of FCC rules. Operation is subject to the following two conditions: (1) This device and its accessories may not cause harmful interference, and (2) this device and its accessories must accept any interference received, including interference that causes undesired operation.

Technical Details

The VX8100 is an all digital phone that operates on both Code Division Multiple Access (CDMA) frequencies: Cellular services at 800 MHz and Personal Communication Services (PCS) at 1.9 GHz.

CDMA technology uses a feature called DSSS (Direct Sequence Spread Spectrum) that enables the phone to keep communication from being crossed and to use one frequency channel by multiple users in the same specific area. This results in a 10-fold capacity increase when compared with analog mode. In addition, features such as soft / softer handoff, hard handoff, and dynamic RF power control technologies combine to reduce call interruptions. The Cellular and PCS CDMA networks consist of MSO (Mobile Switching Office), BSC (Base Station Controller), BTS (Base Station Transmission System), and MS (Mobile Station). The following table lists some major CDMA standards.

Welcome

* TSB -74: Protocol between an IS-95A system and ANSI J-STD-008

1xRTT system receives twice as many subscribers in the wireless section as IS-95. Its battery life is twice as long as IS-95. High-speed data transmission is also possible.

EV-DO system is optimized for data service and is much faster than 1xRTT system in applicable area.

CDMA Standard	Designator	Description			
Basic Air Interface	TIA/EIA-95A TSB-74 ANSI J-STD-008 TIA/EIA-IS2000	CDMA Dual-Mode Air Interface 14.4kbps radio link protocol and inter-band operations IS-95 adapted for PCS frequency band CDMA2000 1xRTT Air Interface			
Network	TIA/EIA/IS-634 TIA/EIA/IS/651 TIA/EIA/IS-41-C TIA/EIA/IS-124	MAS-BS PCSC-RS Intersystem operations Non-signaling data comm.			
Service	TIA/EIA/IS-96-B TIA/EIA/IS-637 TIA/EIA/IS-657 IS-801 TIA/EIA/IS-707-A	Speech CODEC Short Message Service Packet Data Position Determination Service (gpsOne) High Speed Packet Data

FCC RF Exposure Information

WARNING! Read this information before operating the phone.

In August 1996, the Federal Communications Commission (FCC) of the United States, with its action in Report and Order FCC 96-326, adopted an updated safety standard for human exposure to Radio Frequency (RF) electromagnetic energy emitted by FCC regulated transmitters. Those guidelines are consistent with the safety standard previously set by both U.S. and international standards bodies.

The design of this phone complies with the FCC guidelines and these international standards.

Bodily Contact During Operation

This device was tested for typical use with the back of the phone kept 0.6 inches (1.5 cm) from the body. To comply with FCC RF exposure requirements, a minimum separation distance of 0.6 inches (1.5 cm) must be maintained between the user's body and the back of the phone, including the antenna, whether extended or retracted. Third-party belt-clips, holsters, and similar accessories containing metallic components should not be used. Avoid the use of accessories that cannot maintain

0.6 inches (1.5 cm) distance between the user's body and the back of the phone and have not been tested for compliance with FCC RF exposure limits.

Vehicle-Mounted External Antenna

(Optional, if available.)

A minimum separation distance of 8 inches (20 cm) must be maintained between the user / bystander and the vehicle-mounted external antenna to satisfy FCC RF exposure requirements. For more information about RF exposure, visit the FCC website at www.fcc.gov.

Caution

Use only the supplied and approved antenna. Use of unauthorized antennas or modifications could impair call quality, damage the phone, void your warranty and/or result in violation of FCC regulations.

Do not use the phone with a damaged antenna. If a damaged antenna comes into contact with the skin, a minor burn may result. Contact your local dealer for a replacement antenna.

Phone Overview

- 1. Earpiece
- 2. Flip Open the case to answer an incoming call and close to end the call.
- 3. LCD Screen Displays messages and indicator icons.
- 4. Left Soft Key Use to display the function Message menu.
- 5 Headset Jack
- Clear Key Press to delete a single space or character. Press and hold to delete entire words. Press this key once in a menu to go back one level. Use to turn the Speaker On/Off by pressing and holding for about 3 seconds.
- 7. SEND Key Use to place or answer calls.

Getting Started with Your Phone

The Battery

NOTE

It is important to fully charge the battery before initial use of the phone.

The phone comes with a rechargeable battery. Keep the battery charged while not in use in order to maximize talk and standby time. The battery charge level is shown at the top of the LCD screen.

Installing the Battery

To install the battery, insert the bottom of the battery into the opening on the back of the phone. Push the battery down until the latch clicks.

Removing the Battery

Turn the power off. Pull the battery cover downward and remove it. Then remove the battery by pressing the upper area of it.

Charging the Battery

To use the charger provided with your phone:

Warning! Use only the charger provided with the phone. Using any charger other than the one included with the VX8100 may damage your phone or battery.

- Plug the end of the AC adapter into the phone's charger port and the other end into an electrical outlet.
- The charge time varies depending upon the battery level. The maximum charge time for a fully discharged standard battery is 3.5 hours.

Battery Charge Level

The battery charge level is shown at the top right of the LCD screen. When the battery charge level becomes low, the low battery sensor alerts you in three ways: Sounding an audible tone, blinking the battery icon, and displaying LOW BATTERY WARNING! If the battery charge level becomes exceedingly low, the phone automatically switches off and any function in progress is not saved.

Fully Charged

Fully Discharged

Getting Started with Your Phone

Turning the Phone On and Off

Turning the Phone On

- 1. Install a charged battery or connect the phone to an external power source such as a cigarette lighter charger or hands-free car kit.
- for a few seconds until the LCD screen lights up.

NOTE Like any other radio device, avoid any unnecessary contact with the antenna while your phone is on.

Turning the Phone Off

1. Press and hold until the display turns off.

Signal Strength

Call quality depends on the signal strength in your area. The signal strength is indicated on the screen as the number of bars next to the signal strength icon: The more bars, the better the signal strength. If the signal quality is poor, move to an open area. If you are in a building, the reception may be better near a window.

Making Calls

3. Press

1. Make sure the phone is turned on. If not, press for about 3 seconds.

- 2. Enter the phone number (include the area code if needed).
 - If the phone is locked, enter the lock code. Call Failed - indicates the call did not go through.
- 4. Press 🐞 to end the call.

Correcting Dialing Mistakes

If you make a mistake while dialing a number, press [CLR 0] once to erase the last digit entered, or hold down [CLR40] for at least 2 seconds to delete all digits.

Redialing Calls

1. Press twice to redial the last number you dialed. The last 90 numbers are stored in the call history list and you can also select one of these to redial.

Receiving Calls

1. When the phone rings or vibrates, press

NOTE

If you press Left Soft Key [Quiet] while the phone is ringing, the ringing or vibration is muted for that call

If you press Right Soft Key [Ignore] while the phone is ringing, the call will end

2. Press to end the call.

Screen Icons

When the phone is powered on, the top line of the LCD screen displays icons indicating the status of the phone.

Ψail	Signal Strength indicator. The strength of the signal received by the phone is indicated by the number of bars displayed.							
ð	In use indicator. A call is in progress. * No icon indicates the phone is in standby mode.							
ø	No Service indicator. The phone is not receiving a system signal.							
D	Digital indicator. Digital service is available.							
_	Roaming indicator. The phone is outside of the home service area.

Quick Access to Convenient Features

Vibrate Mode

Use Vibrate Mode in public places. When Vibrate Mode is set, () is displayed on the screen, the key tones are silent, and the phone is set to vibrate.

Vibrate Mode Quick Activation

1. From standby mode press * for 3 seconds.

Vibrate Mode Quick Cancellation

1. Press and hold * to switch to Normal Mode.

Lock Mode

Use Lock Mode to prevent others from using your phone. When Lock Mode is set, your 4-digit password is required to use the phone.

NOTE The lock code/password is the last 4 digits of your phone number.

Lock Mode Quick Activation

1. From standby mode, press $\#_{sec}^{\hat{\mathbf{n}}}$ for 3 seconds.

Lock Mode Quick Cancellation

 Press Right Soft Key [Unlock] then enter your 4-digit password.

Mute Function

The Mute Function prevents the other party from hearing your voice, but allows you to hear the other party.

Mute Quick Activation

1. Press Left Soft Key [Mute] during a call.

Mute Quick Cancellation

1. Press Left Soft Key [Unmute] again.

Volume Quick Adjustment

Use the side keys to adjust the earpiece and master volumes. The upper key increases the volume and the lower key decreases the volume.

The earpiece volume can only be adjusted during a call.

NOTE Key beep volume is adjusted through the Menu.

NOTE When the flip is open, you can press \(\big| \) (Lower Side Kev) for 3 seconds to set Sounds Off mode.

Press (Upper Side Key) to switch to Normal Mode.

Call Waiting

Your cellular service may offer Call Waiting. While a call is in progress, two beeps indicate another incoming call. When Call Waiting is enabled, you may put the active call on hold

while you answer the other incoming call. Check with your cellular service provider for information about this function.

- 1. Press send to receive a waiting call.
- 2. Press SEND again to switch between calls.

Caller ID

Caller ID displays the number of the person calling when your phone rings. If the caller's identity is stored in Contacts, the name appears on the screen. Check with your service provider to ensure they offer this feature.

Voice Command

Voice Command is a convenient feature that allows you to activate certain features quickly and easily by verbal command. Using this Voice Commands, you can make phone calls and confirm Voicemail.

- 1. Press the Voice Command Key (*).
- 2. When prompted, say "Call Someone".

When the Headset or Bluetooth Audio Device is connected, Voice Command options are also available on the outside display.

1. Press the Voice Command Key ().

- 2. Press the Left Key () to pause/resume the command prompts.
- 3. Press the Center Key () to select the highlighted option.
- 4. Press the Right Key () to exit and return to idle screen.

NOTE

You may also start Voice commands with the designated button on your Bluetooth device. Please check the manual of the Bluetooth device for further instructions

Speed Dialing

Speed Dialing is a convenient feature that allows you to make phone calls quickly and easily with a few keystrokes. Your phone recalls the number from your Contacts, displays it briefly, and then dials it. Speed Dial number 1 is for Voicemail.

Dialing Single Digit Speed Dials (from 1 to 9)

Press and hold the Speed Dial number. OR Enter the speed dial number and press (SEND).

Dialing Double Digit Speed Dials (from 10 to 99)

Press the first digit and then press and hold the key of the last digit.

OR Enter the first and second digits and press .

Entering and Editing Information

Text Input

You can input and edit your Banner, Schedule, Contacts, and Messages.

Key Functions

Left S

Left Soft Key: Press to scroll access the following text input modes:

T9Word / Abc / ABC / 123 / Symbols

★ 'E_s

Shift: Press to change case.

T9 text: T9Word -> T9WORD -> T9word
Abc text: Abc -> ABC -> abc

O next

Next: In T9 mode, press to display other matching words.

fi

Space: Press to complete a word and insert a space.

CLR ()

Clear: Press to delete a single space or character. Hold to delete words.

1 🖁

Punctuation: In T9 mode, press to insert punctuation in a word and complete a sentence.

Text Input Modes

There are five modes for entering text, numbers, special characters, and punctuation. In a text entry field, pressing Left Soft Key displays a pop-up list of text modes.

T9Word (T9) Mode

Use to type text using one keystroke per letter. The phone translates keystrokes into common words by using the letters on each key and a compressed database.

Abc (Multi-tap) Mode

Use to add words to the T9 database.

123 (Numbers) Mode

Use to type numbers using one keystroke per number.

Symbols Mode

Use to insert special characters or punctuation. There are 38 special characters including "SP" which inserts a space and "LF" which forces the text to the next line.

Changing Letter Case

Using T9 and Abc text input modes you can set the capitalization. Press ** to reach the following:

Initial Cap (T9Word / Abc)

Only the first letter is capitalized and subsequent letters are lower case.

Caps Lock (T9WORD / ABC)

All letters are capitalized.

Lower Case (T9word / abc)

All letters are in lower case.

Text Input Examples

Display the text modes and select a text mode:

- In a text entry field, press Right Soft Key to display text modes.
- Press to highlight the text input mode you want to use.
- 3. Press ok to select the highlighted text input mode.

Using Abc (Multi-tap) Text Input

- 1. Press Left Soft Key \subseteq to change to Abc mode.
- 2. Press * to change to ABC Caps Lock.
- 3. Press 5 jki 5 jki 5 jki 4 ghi . LG is displayed.

Using 123 (Numbers) Text Input

- 1. Press Left Soft Key \(\sqrt{\text{ to change to 123 mode.}} \)
- 2. Press 5_{IM} 5_{IM} 5_{IM} $1_{\frac{a}{2}}$ 2_{abc} $1_{\frac{a}{2}}$ 2_{abc} . 5551212 is displayed.

Using Symbol Text Input

- 1. Press Left Soft Key 🕒 to change to Symbols mode.
- Press Right Soft Key [Next] to view the next 12 symbols or Left Soft Key [Prev] to view the previous 12 symbols.
- 3. Use to highlight the special character you want to insert and press ok to select it.
- 4. Press Left Soft Key \(\sqrt{\text{to change to another text}} \) mode.

Using T9 Mode Text Input

To type the message "Call the office." follow these steps:

- 1. Press Left Soft Key 🥄 to change to T9Word mode.
- 2. Press 2 abc 2 abc 5 jkl 5 jkl .
- 3. Press $\#_{***}^{\mathbf{A}}$ to complete the word and add a space.
- 4. Press $8 \text{ tw} \quad 4 \text{ ghi} \quad 3 \text{ def} \quad \#_{\text{spec}}^{\hat{\mathbf{a}}} \quad 6 \text{ mno} \quad 3 \text{ def} \quad 4 \text{ ghi} \quad 2 \text{ abc}$ $3 \text{ def} \quad 1 \text{ gr} \quad .$

Call the office. is displayed.

Using the NEXT Key

After you have finished entering a word, if the word displayed is not the one you want, press one to display additional choices of words from the database.

- 1. Press 4 ghi 6 mno 3 def .
 - Good is displayed.
- 2. Press $\mathbf{0}^{\text{out}}$. The display gives you additional choices such as: Home, Gone, Hood, etc.

Adding Words to the T9 Database

If a word is not in the T9 database, add it using Abc (Multitap) mode text entry.

- Press Left Soft Key
 to change to Abc (multi-tap)
 mode.
- 2. Press 2 abc 2 abc 6 mno 6 mno 7 pars .

 Bop is displayed.
- 3. Press Left Soft Key to change to T9 Word mode to add the word Bop to the T9 database.
- 4. Press CLR to erase the existing word.
- 5. Press 2_{abc} 6_{mno} 7_{pqrs} . cop is displayed.
- 6. Press **0** next **0** next .

Bop is displayed.

Contacts in Your Phone's Memory

Contacts Entries

This allows you to have easy access to your most frequently dialed phone numbers. You may store up to 500 entries with up to 5 phone numbers each. Each entry may be up to 22 characters. Each phone number may be up to 48 digits.

The Basics of Storing Contacts Entries

- From standby mode, enter the phone number you want to save (up to 48 digits).
- 2. Press Left Soft Key [Save].

- 3. Use to select Save New Contact or Update Existing Contact and press
- 4. Use to select the type of phone number and press ok.

Mobile 1 / Home / Work / Mobile 2 / Fax

NOTE Use **Update Existing Contact** to add another phone number to a contact already stored in memory.

Enter a name for the phone number (up to 22 characters) and press OK.

A confirmation message is displayed briefly.

NOTE To skip name entry, press

6. The phone number reappears on screen. Press to exit, to call the number, or Right Soft Key [Options].

Contacts in Your Phone's Memory

Phone Numbers With Pauses

When you call automated systems such as Voicemail or credit billing numbers, you often have to enter a series of numbers. Instead of entering these numbers by hand, you can store the numbers in your Contacts separated by special pause characters (W, P). There are two different types of pauses you can use when storing a number:

Wait (W)

The phone stops dialing until you press Left Soft Key [Release] to advance to the next number.

Pause (P)

The phone waits 2 seconds before sending the next string of digits.

Storing a Number with Pauses

- 1. From standby mode, enter the number.
- 2. Press Right Soft Key (Options).
- 3. Use to select pause type and press OK. Wait / Pause
- 4. Enter additional number(s) (e.g., pin number or credit card number).

5. Press Left Soft Key (Save).

- 6. Use to select **Save New Contact** or **Update** Existing Contact and press OK.
- 7. Use (to select the type of phone number and press OK.
- 8. Enter a name (up to 22 characters) and press OK. A confirmation message is displayed.

Adding a Pause to an Existing Number

- 1. Press Right Soft Key [Contacts].
- 2. Use to highlight the Contact entry to edit, then press Left Soft Key <a> [Edit].
- 3. Use to highlight the number.
- 4. Press Right Soft Key [Options].
- 5. Press 3def Wait or 4ghi Pause.
- 6. Enter additional number(s) and press OK. A confirmation message is displayed.

Contacts in Your Phone's Memory

Searching Your Phone's Memory

The VX8100 phone is able to perform a dynamic search of the contents in your phone's memory. A dynamic search compares entered letters or numbers against the entries in your Contacts. A matching list is displayed in ascending order. You can then select a number from the list to call or edit. There are several ways to search:

- Scrolling Alphabetically
- Searching by Letter

Scrolling Through Your Contacts

- Press Right Soft Key [Contacts].
 Contacts list is displayed alphabetically.
- 2. Use 🗘 to scroll through the list.

Searching by Letter

- Press Right Soft Key [Contacts].
 Contacts list is displayed alphabetically.
- Press (or press repeatedly) the key on the keypad that corresponds with the search letter.

Making a Call From Your Phone's Memory

Once you have stored phone numbers into your Contacts, you can place calls to those numbers quickly and easily.

- Press sevo after you have searched for a phone number in Contacts or Recent Calls.
- Use Speed Dialing (see page 29).

From Contacts

- 1. Press Right Soft Key (Contacts).
- 2. Use to select the Contact entry then press OK.
- 3. Use 🗘 to select the phone number.
- 4. Press SEND to place the call.

Pressing will dial the Default Number of the Contact entry. If multiple numbers are saved in the Contact entry, you may need to use to select the phone number that you want to call.

From Recent Calls

- 1. Press OK [MENU].
- Press to select RECENT CALLS.
- 3. Use to select the type of recent call then press

Missed / Received / Dialed / All / View Timer

- Use to highlight the phone number.
- 5. Press sewo to place the call.

Speed Dialing

Speed Dialing is a convenient feature that allows you to make phone calls quickly and easily (Speed Dial 1 is for Voicemail). Designate Speed Dials in your Contacts to use this calling feature.

For Speed Dials From 2 to 9

- Press and hold the Speed Dial digit.
 OR
- Press the Speed Dial digit, and then press
- Your phone recalls the phone number from your Contacts, displays it briefly, and then dials it.

For Speed Dials From 10 to 99

- Press the first Speed Dial digit, then press and hold the key of the last Speed Dial digit.
 OR
 - Press the first Speed Dial digit, press the second Speed Dial digit, and then press [Seno].
- Your phone recalls the phone number from your Contacts, displays it briefly, and then dials it.

For Speed Dials for 97, 98 and 99.

Default is 97(#BAL), 98(#MIN), and 99(#PMT).

User can change this speed dial if needed.

Using Phone Menus

Menu Access

Press OK [MENU] or Left Soft Key [Message] to have access to five phone menus. There are two methods of accessing menus and submenus:

- Use to highlight and select, or
- Press the number key that corresponds to the submenu.

For example:

1. Press OK [MENU].

Five menu items are displayed horizontally across the top of the screen.

Use to scroll through the list of menus.

2. Use to highlight your preferred setting and press to select it.

Press to go back one step while accessing the menu or selecting a setting.

NOTE Press CLR (1) to cancel without saving.

GET IT NOW

GET IT NOW allows you to do more than just talk on your phone. GET IT NOW is a technology and service that allows you to download and use applications on your phone. With GET IT NOW, it is quick and easy to personalize your phone to your lifestyle and tastes. Just download the applications that appeal to you. With a wide range of software available, from ringtones to games to productivity tools, you can be assured that you can find something useful, practical, or entertaining.

When the length of content name exceeds the limit, the contents might not be listed or might not operate optimally.

Downloading Applications

You can use GET IT NOW and download applications anywhere on the Verizon Wireless network, as long as you have a digital signal available for your handset.

Incoming Calls

While downloading an application, incoming calls will automatically be sent to your Voicemail, if available. If you do not have Voicemail, downloading will not be interrupted by an incoming call, and the caller will receive a busy signal.

When using applications, an incoming call will automatically pause the application and allow you to answer the call. When you complete your call, you can resume using the application.

1. Press OK [MENU], 2 times, 4 shi , 3 def , 3 def .

4.4 Manage Memory

- Do not install or remove the miniSD card while playing, deleting, moving, recording or downloading the PIX/FLIX/Sound.
 - Up to 512 Mbytes can be saved in the miniSD card.
 - Up to 1500 per My PIX/My FLIX/My Sounds folder.
 When the maximum of 1500 files is reached, files cannot be transferred to card regardless of remaining available capacity.

 Up to 54 characters, including folder names, are supported as file names in the miniSD card.

4.4.1 Save Options

You can choose to save a photo, video, or sounds into the phone or the card. If the capacity of default memory is full, it is saved to another memory.

- 1. Press OK [MENU], 2 times, 4 ghi , 4 ghi , 7 a
- 2. Use to select a setting, then press OK.

PIX / FLIX / Sounds

3. Use to select a setting, then press ok .

Phone Memory / Card Memory

4.4.2 Phone Memory

Shows the memory information saved in your phone.

- 1. Press OK [MENU], 2 times, 4 9hi , 4 9hi , 2 abc.
- Use to select a setting, then press OK.
 Memory Usage / My PIX / My FLIX / My Music / My Sounds
- If you select one of My PIX/My FLIX/My Music/ My Sounds, you can erase or move the file. Press Right soft Key Options1.

- 4. Select **Erase/Move**, then press OK .
- 5. Select the file using , or press Right Soft Key Mark All, then press Left Soft Key Done.
- 6. Press OK to select Yes.

4.4.3 Card Memory

Shows the memory information save in the card.

- 1. Press OK [MENU], 2 times, 4 shi , 4 shi , 3 def .
- Use to select a setting, then press Nemory Usage / My PIX / My FLIX / My Music / My Sounds
- If you select one of My PIX/My FLIX/My Music/ My Sounds, you can erase or move the file. Press Right soft Key [Options].
- 4. Select **Erase/Move**, then press OK .
- 5. Select the file using , or press Right Soft Key Mark All, then press Left Soft Key Done.
- 6. Press OK to select Yes.

Using the miniSD Card

The VX8100 can access the following file types stored on the removable miniSD card:

My PIX: gif, png, jpg, bmp My Sounds: qcp, mid My FLIX: 3gp, 3g2

My Music: wma

Removable memory storage functionality

The following grids depict what can be transferred to the removable miniSD card.

RINGTONES

Memory Usage	Ring Tone	
Downloaded via GET IT NOW application.	YES	Stored to the phone only.
Saved to a removable miniSD card.	N0	Stored to the phone only.
Saving a sound file to the miniSD card & assigning it as a ring tone.	N0	Only ringtones downloaded via "GET IT NOW" can be assigned.

PIX

Memory Usage	PIX					
Pictures received from other users.	YES	Stored to the phone, miniSD Card, and can be copied to the Desktop.				
Download via a GET IT NOW application.	YES	Stored to the phone only.				
User generated pictures.	YES	Information can be stored to the phone, miniSD Card, and can be copied to the Desktop.				
Pictures received from PIX Place.	YES	Stored to phone. Protected content cannot be moved to miniSD Card or Desktop.				

FLIX

Memory Usage	FLIX	
Video Clips received from other users.	YES	Stored to the phone, miniSD Card, and can be copied to the Desktop.
Video Clips downloaded via GET IT NOW.	YES	Stored to the phone only.
Video Clips downloaded via VCAST application.	YES	Stored to the phone only.
User generated video	YES	Stored to phone, miniSD card, and it can be copied to the Desktop.
Video Clips received from PIX Place.	YES	Stored to phone. Protected content cannot be moved to miniSD Card or Desktop.

4.5 Location

Menu for GPS (Global Positioning System: Satellite assisted location information system) mode.

- 1. Press OK [MENU], 2 times, 4 ghi , 5 jkl .
- 2. Use \bigcirc to select a setting, then press \bigcirc K.

Location On / E911 Only

NOTE GPS satellite signals are not always transmitted, especially under bad atmospheric and environmental conditions, indoors, etc.

4.6 Security

The Security menu allows you to secure the phone electronically.

1. Press OK [MENU], 2 times, 4 9hi , 6 mno .

4.6.1 Lock Phone

Keeps your phone from unauthorized use. Once the phone is locked, it is in restricted mode until the lock code is entered. You can receive phone calls and still make emergency calls. You can modify the lock code using the New Lock code within the Security menu.

1. Press OK [MENU], 2 times, 4 shi , 6 mno

2. Enter the four-digit lock code.

The lock code is: the last 4 digits of your mobile phone number if it is set.

The last 4 digits of ESN if your mobile phone number is not set.

- 3. Press 1 Lock Phone.
- 4. Select an option then press OK.

Unlock The phone is never locked (Lock mode can be used).

Lock The phone is always locked. When locked, you can receive incoming calls and only make emergency calls.

On Power Up The phone is locked when it is turned on.

4.6.2 Emergency #s

Allows you to enter 3 emergency numbers. You can call these emergency numbers and 911, even when the phone is locked or restricted.

- 1. Press OK [MENU], 2 times, 4 ghi , 6 mno
- 2. Enter the four-digit lock code.
- 3. Press 2 abc Emergency #s.

4. Select emergency number using 🗘 .

5. Enter an emergency phone number then press OK .

4.6.3 Change Code

Allows you to enter a new four-digit lock code.

- 1. Press OK [MENU], 2 times, 4 9hi , 6 mno .
- 2. Enter the four-digit lock code.
- 3. Press 3 def Change Code.
- For confirmation, it will ask you to enter the new lock code again.

4.6.4 Frase Contacts

Allows you to erase all of your Contacts at once.

- 1. Press OK [MENU], 2 times, 4 ghi , 6 mno
- 2. Enter the four-digit lock code.
- 3. Press 4 ghi Erase Contacts.
- 4. Press 1 2 Yes.

NOTE There is no confirmation message before all of your Contacts are erased? As soon as Yes is selected, they are gone!

Using Phone Menus

4.6.5 Reset Default

Allows you to reset your phone to the factory default settings.

- 1. Press OK [MENU], 2 times, 4 ghi , 6 mno .
- 2. Enter the four-digit lock code.
- 3. Press 5 | Reset Default.
- 4. Press OK after reading the warning message.
- 5. Press 1 Revert.

A confirmation message is displayed briefly before the phone resets itself.

4.7 Language

Allows you to set the bilingual feature according to your preference. Choose between English and Spanish.

- 1. Press OK [MENU], 2 times, 4 shi , 7 pqrs .
- 2. Use 🗘 to select a setting, then press ok .

English / Spanish

5. Call Settings

The Call Setup menu allows you to designate how the phone handles both incoming and outgoing calls.

Access and Options

- 1. Press OK [MENU].
- 2. Press 2 times to select [SETTINGS & TOOLS].
- 3. Press 5 M Call Settings.
- 4. Select a submenu.

Answer Options, Auto Retry, TTY Mode, One-Touch Dial, Voice Privacy and Auto Volume.

5.1 Answer Options

Allows you to determine how to handle an answered call.

- 1. Press OK [MENU], 2 times, 5 id., 1 2 i.
- 2. Use to select a setting, then press K.

 Flip Open / Any Key / Send Only / Auto Answer

NOTE When the flip is closed, the Auto Answer Mode will not function, except when connected to a headset or hands-free car kit. When the flip is open, the Auto Answer Mode will only function when the Speaker Mode is set to On. The Auto Answer will function after about five (5) seconds.

When Ringer is set to mute such as below settings, Ringer is not activated

 When Silence All / All Sounds Off / Alarm Only is set or individual contact Ringer ID is set to No Ring / Silence.

When Ringer is set to mute with side key or "Quiet".

5.2 Auto Retry

Allows you to set the length of time the phone waits before automatically redialing a number when the attempted call fails

- 1. Press OK [MENU], 2 times, 5 M, 2 abc.
- 2. Use 🗘 to select a setting, then press OK .

Off / Every 10 seconds / Every 30 seconds / Every 60 seconds

5.3 TTY Mode

Allows you to attach a TTY device enabling you to communicate with parties also using a TTY device. A phone with TTY support is able to translate typed characters to voice. Voice can also be translated into characters and then displayed on the TTY.

- 1. Press OK [MENU], 2 times, 5 ju , 3 set .

 An explanation message is displayed.
- 2. Press OK to continue.
- 3. Use 🗘 to select a setting, then press OK.

TTY Full / TTY + Talk / TTY + Hear / TTY Off

Using Phone Menus

5.4 One-Touch Dial

Allows you to initiate a speed dial call by pressing and holding the speed dial digit. If set to Disable, Speed Dial numbers designated in your Contacts will not function.

- 1. Press \bigcirc K [MENU], \bigcirc 2 times, $\boxed{5}$ MI, $\boxed{4}$ ghi .
- 2. Use to select a setting, then press OK . On / Off

5.5 Voice Privacy

Allows you to set the voice privacy feature for CDMA calls as Enhanced or Standard. CDMA offers inherent voice privacy. Check with your service provider for availability.

- 1. Press OK [MENU], 2 times, 5 in , 5 in .
- 2. Use to select a setting, then press K. Enhanced / Standard

5.6 Auto Volume

Provides a better audio experience by enabling the Auto Volume feature to control the dynamic range and volume of the sending and receiving voice across different levels of speaker and environments.

1. Press OK [MENU], 2 times, 5 jkl , 6 mno .

2. Use to select a setting, then press oK.
On / Off

6. Clock Format

Allows you to choose the kind of clock to be displayed on the LCD screen.

- 1. Press OK [MENU], 2 times, 6 mno.
- 2. Press 1 Main Clock or 2 abo Front Clock.
- 3. Use to select a setting, then press K. Normal / Analog (or Minimize)

7. Ringer ID

Allows you to set a designated ringer ID when the phone rings.

- 1. Press OK [MENU], 2 times, 7_{pqrs}.
- 2. Use to select a setting, then press or .
 On / Off

8. Picture ID

Allows you to set the phone to display the designated picture ID when the phone rings.

- 1. Press OK [MENU], 2 times, 8 tuv.
- 2. Use \bigcirc to select a setting, then press \bigcirc . On / Off

9. PC Connection

Allows you to select the data port.

- 1. Press OK [MENU], 2 times, 9^{wxyz}.
- 2. Use to select a setting, then press USB / RS-232C(COM Port) / Bluetooth / Closed

NOTE If you want to use the bluetooth function connecting PC, the PC or PDA should be paired with the phone. If it's not, you can not use bluetooth PC connection, even if Bluetooth port is selected.

0. Bluetooth™

The VX8100 is compatible with devices that support the Bluetooth headset and hands-free profile(s)*. You may create and store 20 pairings within the VX8100 and connect to one device at a time. The approximate communication range for Bluetooth wireless technology is up to 30 feet (10 meters).

NOTE Read user guide of each bluetooth accessory that you are trying to pair with your phone because the instructions may be different.

Access and Options

- 1. Press OK [MENU].
- 2. Press 2 times to select [SETTINGS & TOOLS].
- 3. Press Onext Bluetooth.
- Select a submenu.

Paired Devices, Power, My Visibility, My Bluetooth Name and My Bluetooth Info.

Using Phone Menus

0.1 Paired Devices

Pairing is the process that allows the handset to locate, establish and register 1-to-1 connection with the target device.

For pairing new Bluetooth device

- Follow the Bluetooth accessory instructions to set the device to pairing mode.
- 3. Press Right Soft Key for New. Select Search New 1 and press OK.
- 4. If Bluetooth is set to off, you will be prompted to turn power on. Select **Yes** 1 and press OK.
- The device will appear in the Found Devices menu once it has been located. Highlight the device and press OK.
- The handset will prompt you for the passkey. Consult the Bluetooth accessory instructions for the appropriate passkey (typically "0000" - 4 zeroes). Enter the passkey and press OK.

Phone does not support Bluetooth OBEX Profiles.

* For vehicle/accessory compatibility go to www.verizonwireless.com/bluetoothchart

- 7. Once pairing is successful, select **Yes** 1 and press occurred to connect with the device.
- 8. Once connected, you will see the device listed in the **Paired Devices** menu and the Bluetooth connected icon will show up on your idle screen.

0.2 Power

Allows you to set the power On/Off.

- 1. Press OK [MENU], 2 times, 0 next , 2 abc .
- Use to select a setting, then press K.
 On / Off

NOTE By default, your device's Bluetooth functionality is turned off

0.3 My Visibility

Allows you to set Hidden/Shown To All.

- 1. Press OK [MENU], 2 times, 0 next , 3 def .
- 2. Use \bigcirc to select a setting, then press \bigcirc .

Hidden / Shown To All

NOTE If you turn on My Visibility, your device is able to be searched by other in-range Bluetooth devices.

0.4 My Bluetooth Name

Allows you edit the name of the bluetooth name.

- 1. Press OK [MENU], 2 times, 0 next , 4 ghi .
- 2. Press CLR to clear the existing name.
- 3. Use the numeric keypad to enter a new custom name.
- 4. Press OK to save and exit.

0.5 My Bluetooth Info

Allows you to view the information of the bluetooth.

1. Press OK [MENU], 2 times, 0 next , 5 | M .

Transfering Audio

When a Bluetooth audio device is connected, **Use Bluetooth**/ **Use Phone** is displayed in the options menu for call state.

- Use Bluetooth When this option is selected from the menu, sound comes from the Bluetooth audio device.
- Use Phone When this option is selected from the menu, sound comes from the handset.

Phone does not support Bluetooth OBEX Profiles.

* For vehicle/accessory compatibility go to www.verizonwireless.com/bluetoothchart.

TIA Safety Information

The following is the complete TIA Safety Information for wireless handheld phones.

Exposure to Radio Frequency Signal

Your wireless handheld portable phone is a low power radio transmitter and receiver. When it is ON, it receives and also sends out Radio Frequency (RF) signals. In August, 1996, the Federal Communications Commissions (FCC) adopted RF exposure guidelines with safety levels for handheld wireless phones. Those guidelines are consistent with the safety standards previously set by both U.S. and international standards bodies:

ANSI C95.1 (1992) *
NCRP Report 86 (1986)
ICNIRP (1996)

American National Standards Institute; National Council on Radiation Protection and Measurements; International Commission on Non-Ionizing Radiation Protection Those standards were based on comprehensive and

periodic evaluations of the relevant scientific literature.

For example, over 120 scientists, engineers, and physicians from universities, government health agencies, and industry reviewed the available body of research to develop the ANSI Standard (C95.1).

The design of your phone complies with the FCC quidelines (and those standards).

Antenna Care

Use only the supplied or an approved replacement antenna. Unauthorized antennas, modifications, or attachments could damage the phone and may violate FCC regulations.

Phone Operation

NORMAL POSITION: Hold the phone as you would any other telephone with the antenna pointed up and over your shoulder.

Tips on Efficient Operation

For your phone to operate most efficiently:

Do not touch the antenna unnecessarily when the phone is in use. Contact with the antenna affects call quality and may cause the phone to operate at a higher power level than otherwise needed.

Driving

Check the laws and regulations on the use of wireless phones in the areas where you drive and always obey them. Also, if using your phone while driving, please observe the following:

- Give full attention to driving -- driving safely is your first responsibility;
- Use hands-free operation, if available;
- Pull off the road and park before making or answering a call if driving conditions or the law so require.

Electronic Devices

Most modern electronic equipment is shielded from RF signals. However, certain electronic equipment may not be shielded against the RF signals from your wireless phone.

Pacemakers

The Health Industry Manufacturers Association recommends that a minimum separation of six (6) inches be maintained between a handheld wireless phone and a pacemaker to avoid potential interference with the pacemaker. These recommendations are consistent with the independent research by and recommendations of Wireless Technology Research.

Persons with pacemakers:

- Should ALWAYS keep the phone more than six (6) inches from their pacemaker when the phone is turned ON:
- Should not carry the phone in a breast pocket;
- Should use the ear opposite the pacemaker to minimize the potential for interference:
- Should turn the phone OFF immediately if there is any reason to suspect that interference is taking place.

Hearing Aids

Some digital wireless phones may interfere with some hearing aids. In the event of such interference, you may want to consult your service provider (or call the customer service line to discuss alternatives). Optional for each phone manufacturer.

Other Medical Devices

If you use any other personal medical device, consult the manufacturer of your device to determine if it is adequately shielded from external RF energy. Your physician may be able to assist you in obtaining this information.

Health Care Facilities

Turn your phone OFF in health care facilities when any regulations posted in these areas instruct you to do so. Hospitals or health care facilities may use equipment that could be sensitive to external RF energy.

Vehicles

RF signals may affect improperly installed or inadequately shielded electronic systems in motor vehicles. Check with the manufacturer or its representative regarding your vehicle. You should also consult the manufacturer of any equipment that has been added to your vehicle.

Posted Facilities

Turn your phone OFF in any facility where posted notices so require.

Aircraft

FCC regulations prohibit using your phone while in the air. Switch OFF your phone before boarding an aircraft.

Blasting Areas

To avoid interfering with blasting operations, turn your phone OFF when in a "blasting area" or in areas posted: "Turn off two-way radio". Obey all signs and instructions.

Potentially Explosive Atmosphere

Turn your phone OFF when in any area with a potentially explosive atmosphere and obey all signs and instructions. Sparks in such areas could cause an explosion or fire resulting in bodily injury or even death.

Areas with a potentially explosive atmosphere are often, but not always marked clearly. Potential areas may include: fueling areas (such as gasoline stations); below deck on boats; fuel or chemical transfer or storage facilities; vehicles using liquefied petroleum gas (such as propane or butane); areas where the air contains chemicals or particles (such as grain, dust, or metal powders); and any other area where you would normally be advised to turn off your vehicle engine.

For Vehicles Equipped with an Air Bag

An air bag inflates with great force. DO NOT place objects, including either installed or portable wireless equipment, in the area over the air bag or in the air bag deployment area. If in-vehicle wireless equipment is improperly installed and the air bag inflates, serious injury could result.

Safety Information

Please read and observe the following information for safe and proper use of your phone and to prevent damage. Also, keep the user guide in an accessible place at all times after reading it.

Violation of the instructions may cause minor or serious damage to the product.

Charger and Adapter Safety

The charger and adapter are intended for indoor use only.

Battery Information and Care

- Please dispose of your battery properly or take it to your local wireless carrier for recycling.
- The battery does not need to be fully discharged before recharging.
- Use only LG-approved chargers specific to your phone model since they are designed to maximize battery life.
- Do not disassemble or short-circuit the battery.
- · Keep the battery's metal contacts clean.
- Replace the battery when it no longer provides acceptable performance. The battery can be recharged several hundred times before replacement.

- Recharge the battery after long periods of non-use to maximize battery life.
- Battery life will vary due to usage patterns and environmental conditions.
- Use of extended backlighting, Browser, and data connectivity kits affect battery life and talk/standby times.
- The self-protection function of the battery cuts the power of the phone when its operation is in an abnormal state. In this case, remove the battery from the phone, reinstall it, and turn the phone on.

Explosion, Shock, and Fire Hazards

- Do not put your phone in a place subject to excessive dust and keep the minimum required distance between the power cord and heat sources.
- Unplug the power cord prior to cleaning your phone, and clean the power plug pin when it is dirty.
- When using the power plug, ensure that it is firmly connected. If it is not, it may cause excessive heat or fire.
- If you put your phone in a pocket or bag without covering the receptacle of the phone (power plug pin), metallic articles (such as a coin, paperclip or pen) may short-circuit the phone. Always cover the receptacle when not in use

Safety

 Do not short-circuit the battery. Metallic articles such as a coin, paperclip or pen in your pocket or bag may short-circuit the + and – terminals of the battery (metal strips on the battery) upon moving. Short-circuit of the terminal may damage the battery and cause an explosion.

General Notice

- Using a damaged battery or placing a battery in your mouth may cause serious injury.
- Do not place items containing magnetic components such as a credit card, phone card, bank book, or subway ticket near your phone. The magnetism of the phone may damage the data stored in the magnetic strip.
- Talking on your phone for a long period of time may reduce call quality due to heat generated during use.
- When the phone is not used for a long period time, store it in a safe place with the power cord unplugged.
- Using the phone in proximity to receiving equipment (i.e., TV or radio) may cause interference to the phone.
- Do not use the phone if the antenna is damaged. If a damaged antenna contacts skin, it may cause a slight burn. Please contact an LG Authorized Service Center to replace the damaged antenna.

- Do not immerse your phone in water. If this happens, turn it off immediately and remove the battery. If the phone does not work, take it to an LG Authorized Service Center.
- The power cord on this product will expose you to lead, a chemical known to the State of California to cause cancer birth defects or other reproductive harm. Wash hands after handling.
- Do not paint your phone.
- The data saved in your phone might be deleted due to careless use, repair of the phone, or upgrade of the software. Please backup your important phone numbers. (Ring tones, text messages, voice messages, pictures, and videos could also be deleted.)
 The manufacturer is not liable for damage due to the loss of data
- When you use the phone in public places, set the ringtone to vibration so as not to disturb others.
- Do not turn your phone on or off when putting it to your ear.

FDA Consumer Update

The U.S. Food and Drug Administration's Center for Devices and Radiological Health Consumer Update on Mobile Phones:

1. Do wireless phones pose a health hazard?

The available scientific evidence does not show that any health problems are associated with using wireless phones. There is no proof, however, that wireless phones are absolutely safe. Wireless phones emit low levels of Radio Frequency (RF) energy in the microwave range while being used. They also emit very low levels of RF when in the standby mode. Whereas high levels of RF can produce health effects (by heating tissue), exposure to low level RF that does not produce heating effects causes no known adverse health effects. Many studies of low level RF exposures have not found any biological effects. Some studies have suggested that some biological effects may occur, but such findings have not been confirmed by additional research. In some cases, other researchers have had difficulty in reproducing those studies, or in determining the reasons for inconsistent results.

2. What is the FDA's role concerning the safety of wireless phones?

Under the law, the FDA does not review the safety of

radiation-emitting consumer products such as wireless phones before they can be sold, as it does with new drugs or medical devices. However, the agency has authority to take action if wireless phones are shown to emit Radio Frequency (RF) energy at a level that is hazardous to the user. In such a case, the FDA could require the manufacturers of wireless phones to notify users of the health hazard and to repair, replace, or recall the phones so that the hazard no longer exists.

Although the existing scientific data do not justify FDA regulatory actions, the FDA has urged the wireless phone industry to take a number of steps, including the following:

- Support needed research into possible biological effects of RF of the type emitted by wireless phones;
- Design wireless phones in a way that minimizes any RF exposure to the user that is not necessary for device function; and
- Cooperate in providing users of wireless phones with the best possible information on possible effects of wireless phone use on human health.

Safety

The FDA belongs to an interagency working group of the federal agencies that have responsibility for different aspects of RF safety to ensure coordinated efforts at the federal level. The following agencies belong to this working group:

- National Institute for Occupational Safety and Health
- Environmental Protection Agency
- Occupational Safety and Health Administration
- National Telecommunications and Information Administration

The National Institutes of Health participates in some interagency working group activities, as well.

The FDA shares regulatory responsibilities for wireless phones with the Federal Communications Commission (FCC). All phones that are sold in the United States must comply with FCC safety guidelines that limit RF exposure. The FCC relies on the FDA and other health agencies for safety questions about wireless phones.

The FCC also regulates the base stations that the wireless phone networks rely upon. While these base stations operate at higher power than do the wireless phones themselves, the RF exposures that people get from these base stations are typically thousands of times

lower than those they can get from wireless phones. Base stations are thus not the subject of the safety questions discussed in this document.

3. What kinds of phones are the subject of this update?

The term "wireless phone" refers here to handheld wireless phones with built-in antennas, often called "cell", "mobile", or "PCS" phones. These types of wireless phones can expose the user to measurable Radio Frequency (RF) energy because of the short distance between the phone and the user's head. These RF exposures are limited by FCC safety guidelines that were developed with the advice of the FDA and other federal health and safety agencies. When the phone is located at greater distances from the user, the exposure to RF is drastically lower because a person's RF exposure decreases rapidly with increasing distance from the source. The so-called "cordless phones," which have a base unit connected to the telephone wiring in a house, typically operate at far lower power levels, and thus produce RF exposures far below the FCC safety limits.

4. What are the results of the research done already?

The research done thus far has produced conflicting results, and many studies have suffered from flaws in their research methods. Animal experiments investigating the effects of Radio Frequency (RF) energy exposures characteristic of wireless phones have vielded conflicting results that often cannot be repeated in other laboratories. A few animal studies, however, have suggested that low levels of RF could accelerate the development of cancer in laboratory animals. However, many of the studies that showed increased tumor development used animals that had been genetically engineered or treated with cancercausing chemicals so as to be pre-disposed to develop cancer in the absence of RF exposure. Other studies exposed the animals to RF for up to 22 hours per day. These conditions are not similar to the conditions under which people use wireless phones, so we do not know with certainty what the results of such studies mean for human health. Three large epidemiology studies have been published since December 2000. Between them, the studies investigated any possible association between the use of wireless phones and primary brain cancer, glioma. meningioma, or acoustic neuroma, tumors of the brain or salivary gland, leukemia, or other cancers. None of the

studies demonstrated the existence of any harmful health effects from wireless phone RF exposures. However, none of the studies can answer questions about long-term exposures, since the average period of phone use in these studies was around three years.

5. What research is needed to decide whether RF exposure from wireless phones poses a health risk?

A combination of laboratory studies and epidemiological studies of people actually using wireless phones would provide some of the data that are needed. Lifetime animal exposure studies could be completed in a few years. However, very large numbers of animals would be needed to provide reliable proof of a cancer promoting effect if one exists. Epidemiological studies can provide data that is directly applicable to human populations, but ten or more years follow-up may be needed to provide answers about some health effects, such as cancer. This is because the interval between the time of exposure to a cancer-causing agent and the time tumors develop — if they do — may be many, many years. The interpretation of epidemiological studies is hampered by difficulties in measuring actual RF exposure during day-to-day use of wireless phones. Many factors affect this measurement, such as the angle at which the phone is held, or which model of phone is used.

6. What is the FDA doing to find out more about the possible health effects of wireless phone RF?

The FDA is working with the U.S. National Toxicology Program and with groups of investigators around the world to ensure that high priority animal studies are conducted to address important questions about the effects of exposure to Radio Frequency (RF) energy.

The FDA has been a leading participant in the World Health Organization International Electro Magnetic Fields (EMF) Project since its inception in 1996. An influential result of this work has been the development of a detailed agenda of research needs that has driven the establishment of new research programs around the world. The project has also helped develop a series of public information documents on EMF issues.

The FDA and the Cellular Telecommunications & Internet Association (CTIA) have a formal Cooperative Research And Development Agreement (CRADA) to do research on wireless phone safety. The FDA provides the scientific oversight, obtaining input from experts in government, industry, and academic organizations. CTIA-funded research is conducted through contracts with independent investigators. The initial research will include both laboratory studies and studies of wireless phone

users. The CRADA will also include a broad assessment of additional research needs in the context of the latest research developments around the world.

7. How can I find out how much Radio Frequency energy exposure I can get by using my wireless phone?

All phones sold in the United States must comply with Federal Communications Commission (FCC) guidelines that limit Radio Frequency (RF) energy exposures. The FCC established these guidelines in consultation with the FDA and the other federal health and safety agencies. The FCC limit for RF exposure from wireless phones is set at a Specific Absorption Rate (SAR) of 1.6 watts per kilogram (1.6 W/kg). The FCC limit is consistent with the safety standards developed by the Institute of Electrical and Electronic Engineering (IEEE) and the National Council on Radiation Protection and Measurement. The exposure limit takes into consideration the body's ability to remove heat from the tissues that absorb energy from the wireless phone and is set well below levels known to have effects. Manufacturers of wireless phones must report the RF exposure level for each model of phone to the FCC. The FCC website (http://www.fcc.gov/oet/rfsafety) gives directions for locating the FCC identification number on your phone so you can find your phone's RF exposure level in the online listing.

8. What has the FDA done to measure the Radio Frequency energy coming from wireless phones?

The Institute of Electrical and Electronic Engineers (IEEE) is developing a technical standard for measuring the Radio Frequency (RF) energy exposure from wireless phones and other wireless handsets with the participation and leadership of FDA scientists and engineers. The standard. "Recommended Practice for Determining the Spatial-Peak Specific Absorption Rate (SAR) in the Human Body Due to Wireless Communications Devices: Experimental Techniques", sets forth the first consistent test methodology for measuring the rate at which RF is deposited in the heads of wireless phone users. The test method uses a tissue-simulating model of the human head. Standardized SAR test methodology is expected to greatly improve the consistency of measurements made at different laboratories on the same phone. SAR is the measurement of the amount of energy absorbed in tissue. either by the whole body or a small part of the body. It is measured in watts/kg (or milliwatts/g) of matter. This measurement is used to determine whether a wireless phone complies with safety guidelines.

9. What steps can I take to reduce my exposure to Radio Frequency energy from my wireless phone?

If there is a risk from these products — and at this point we do not know that there is — it is probably very small. But if you are concerned about avoiding even potential risks, you can take a few simple steps to minimize your exposure to Radio Frequency (RF) energy. Since time is a key factor in how much exposure a person receives, reducing the amount of time spent using a wireless phone will reduce RF exposure. If you must conduct extended conversations by wireless phone every day, you could place more distance between your body and the source of the RF. since the exposure level drops off dramatically with distance. For example, you could use a headset and carry the wireless phone away from your body or use a wireless phone connected to a remote antenna. Again, the scientific data do not demonstrate that wireless phones are harmful. But if you are concerned about the RF exposure from these products, you can use measures like those described above to reduce your RF exposure from wireless phone use.

10. What about children using wireless phones?

The scientific evidence does not show a danger to users of wireless phones, including children and teenagers. If you want to take steps to lower exposure to Radio Frequency (RF) energy, the measures described above would apply to children and teenagers using wireless phones. Reducing the time of wireless phone use and increasing the distance between the user and the RF source will reduce RF exposure.

Some groups sponsored by other national governments have advised that children be discouraged from using wireless phones at all. For example, the government in the United Kingdom distributed leaflets containing such a recommendation in December 2000. They noted that no evidence exists that using a wireless phone causes brain tumors or other ill effects. Their recommendation to limit wireless phone use by children was strictly precautionary; it was not based on scientific evidence that any health hazard exists.

11. What about wireless phone interference with medical equipment?

Radio Frequency (RF) energy from wireless phones can interact with some electronic devices. For this reason. the FDA helped develop a detailed test method to measure Electro Magnetic Interference (EMI) of implanted cardiac pacemakers and defibrillators from wireless telephones. This test method is now part of a standard sponsored by the Association for the Advancement of Medical Instrumentation (AAMI). The final draft, a joint effort by the FDA, medical device manufacturers, and many other groups, was completed in late 2000. This standard will allow manufacturers to ensure that cardiac pacemakers and defibrillators are safe from wireless phone EMI.

The FDA has tested hearing aids for interference from handheld wireless phones and helped develop a voluntary standard sponsored by the Institute of Electrical and Electronic Engineers (IEEE). This standard specifies test methods and performance requirements for hearing aids and wireless phones so that no interference occurs when a person uses a "compatible" phone and a "compatible" hearing aid at the same time. This standard was approved by the IEEE in 2000.

The FDA continues to monitor the use of wireless phones for possible interactions with other medical devices. Should harmful interference be found to occur, the FDA will conduct testing to assess the interference and work to resolve the problem.

12. Where can I find additional information?

For additional information, please refer to the following resources:

National Radiological Protection Board (UK) (http://www.nrpb.org.uk/)

10 Driver Safety Tips

Your wireless phone gives you the powerful ability to communicate by voice almost anywhere, anytime. An important responsibility accompanies the benefits of wireless phones, one that every user must uphold. When operating a car, driving is your first responsibility. When using your wireless phone behind the wheel of a car, practice good common sense and remember the following tips:

- Get to know your wireless phone and its features such as speed dial and redial. Carefully read your instruction manual and learn to take advantage of valuable features most phones offer, including automatic redial and memory. Also, work to memorize the phone keypad so you can use the speed dial function without taking your attention off the road.
- When available, use a hands-free device. A number of hands-free wireless phone accessories are readily available today. Whether you choose an installed mounted device for your wireless phone or a speaker phone accessory, take advantage of these devices if available to you.

- Position your wireless phone within easy reach. Make sure you place your wireless phone within easy reach and where you can reach it without removing your eyes from the road. If you get an incoming call at an inconvenient time, if possible, let your voicemail answer it for you.
- 4. Suspend conversations during hazardous driving conditions or situations. Let the person you are speaking with know you are driving; if necessary, suspend the call in heavy traffic or hazardous weather conditions. Rain, sleet, snow, and ice can be hazardous, but so is heavy traffic. As a driver, your first responsibility is to pay attention to the road.
- 5. Do not take notes or look up phone numbers while driving. If you are reading an address book or business card, or writing a "to-do" list while driving a car, you are not watching where you are going. It is common sense. Do not get caught in a dangerous situation because you are reading or writing and not paying attention to the road or nearby vehicles.
- Dial sensibly and assess the traffic; if possible, place calls when you are not moving or before pulling into traffic. Try to plan your calls before you begin your trip

- or attempt to coincide your calls with times you may be stopped at a stop sign, red light, or otherwise stationary. But if you need to dial while driving, follow this simple tip -- dial only a few numbers, check the road and your mirrors, then continue.
- 7. Do not engage in stressful or emotional conversations that may be distracting. Stressful or emotional conversations and driving do not mix; they are distracting and even dangerous when you are behind the wheel of a car. Make people you are talking with aware you are driving and if necessary, suspend conversations which have the potential to divert your attention from the road.
- 8. Use your wireless phone to call for help. Your wireless phone is one of the greatest tools you can own to protect yourself and your family in dangerous situations -- with your phone at your side, help is only three numbers away. Dial 911 or other local emergency number in the case of fire, traffic accident, road hazard, or medical emergency. Remember, it is a free call on your wireless phone!

- 9. Use your wireless phone to help others in emergencies. Your wireless phone provides you a perfect opportunity to be a "Good Samaritan" in your community. If you see an auto accident, crime in progress or other serious emergency where lives are in danger, call 911 or other local emergency number, as you would want others to do for you.
- 10. Call roadside assistance or a special wireless nonemergency assistance number when necessary. Certain situations you encounter while driving may require attention, but are not urgent enough to merit a call for emergency services. But you can still use your wireless phone to lend a hand. If you see a brokendown vehicle posing no serious hazard, a broken traffic signal, a minor traffic accident where no one appears injured or a vehicle you know to be stolen, call roadside assistance or other special nonemergency wireless number.

For more information, please call to 888-901-SAFE, or visit our website www.wow-com.com.

Consumer Information on SAR

(Specific Absorption Rate)

This model phone meets the government's requirements for exposure to radio waves. Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to Radio Frequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health.

The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. Tests for SAR are conducted using standard operating positions specified by the FCC with the phone transmitting at its highest certified power level in all tested frequency bands. Although SAR is determined at

Safety

the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. Because the phone is designed to operate at multiple power levels to use only the power required to reach the network, in general, the closer you are to a wireless base station antenna, the lower the power output.

Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government-adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model.

The highest SAR value for this model phone when tested for use at the ear is 1.16 W/kg and when worn on the body, as described in this user guide, is 0.936W/kg (bodyworn measurements differ among phone models, depending upon available accessories and FCC requirements). While there may be differences between SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure.

The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF emission guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of http://www.fcc.gov/oet/fccid after searching on FCC ID BEJVX8100. Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) website at http://www.wow-com.com.

* In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

FCC Hearing-Aid Compatibility (HAC) Regulations for Wireless Devices

On July 10, 2003, the U.S. Federal Communications
Commission (FCC) Report and Order in WT Docket 01-309
modified the exception of wireless phones under the
Hearing Aid Compatibility Act of 1988 (HAC Act) to require
digital wireless phones be compatible with hearing-aids.
The intent of the HAC Act is to ensure reasonable access
to telecommunications services for persons with hearing
disabilities.

While some wireless phones are used near some hearing devices (hearing aids and cochlear implants), users may detect a buzzing, humming, or whining noise. Some hearing devices are more immune than others to this interference noise, and phones also vary in the amount of interference they generate.

The wireless telephone industry has developed a rating system for wireless phones, to assist hearing device users find phones that may be compatible with their hearing devices. Not all phones have been rated. Phones that are rated have the rating on their box or a label located on the hox

The ratings are not guarantees. Results will vary depending on the user's hearing device and hearing loss. If your hearing device happens to be vulnerable to interference, you may not be able to use a rated phone successfully. Trying out the phone with your hearing device is the best way to evaluate it for your personal needs.

M-Ratings: Phones rated M3 or M4 meet FCC requirements and are likely to generate less interference to hearing devices than phones that are not labeled. M4 is the better/higher of the two ratings.

Hearing devices may also be rated. Your hearing device manufacturer or hearing health professional may help you find this rating. Higher ratings mean that the hearing device is relatively immune to interference noise. The hearing aid and wireless phone rating values are then added together. A sum of 5 is considered acceptable for normal use. A sum of 6 is considered for best use.

In the above example, if a hearing aid meets the M2 level rating and the wireless phone meets the M3 level rating, the sum of the two values equal M5. This should provide the hearing aid user with "normal usage" while using their hearing aid with the particular wireless phone. "Normal usage" in this context is defined as a signal quality that is acceptable for normal operation.

The M mark is intended to be synonymous with the U mark. The T mark is intended to be synonymous with the UT mark. The M and T marks are recommended by the Alliance for Telecommunications Industries Solutions (ATIS). The U and UT marks are referenced in Section 20.19 of the FCC Rules. The HAC rating and measurement procedure are described in the American National Standards Institute (ANSI) C63.19 standard.

When you're talking over the cell phone, it's recommended you'd turn the BT mode off for HAC.

There are a variety of accessories available for your mobile phone. Consult your local dealer for availability.

Adapter

The Adapter allows you to charge the battery while away from your home or office. It supports standard U.S. AC120 Volt 60 Hz outlets.

Battery

Two types of battery are available; The standard battery and the extended battery.

Cigarette Lighter Charger

The cigarette lighter charger allows you to operate the phone and trickle charge the phone's battery from your vehicle. It takes 3.5 hours to charge a completely discharged standard battery.

Hands-Free Car Kit (Portable)

The hands-free car kit enables you to attach the phone to the power jack in your car, providing you with hands-free operation. It can charge a completely discharged battery in 5 hours.

Steren Headset

The headset connects to your phone allowing hands-free operation. It includes earpiece and microphone.

The Phone operates in vibration/no sound mode on Manner Mode/Silence All Mode even when connected to a headset

IISB Cable

Connects your phone to your PC.

Battery Pack Charger

The battery pack charger allows you to charge the battery pack itself without the phone. It can charge a completely discharged standard battery in 3.5 hours.

Warranty Information

1. WHAT THIS WARRANTY COVERS:

LG offers you a limited warranty that the enclosed subscriber unit and its enclosed accessories will be free from defects in material and workmanship, according to the following terms and conditions:

- (1) The limited warranty for the unit and enclosed accessories shall be a period of one (1) year from the date of original purchase. The remaining warranty period for the unit being repaired or replaced shall be determined by presentation of the original sales receipt for the purchase of the unit.
- (2) The limited warranty extends only to the original purchaser of the product and is not assignable or transferable to any subsequent purchaser / end user.
- (3) The limited warranty is good only to the original purchaser of the product during the warranty period as long as it is in the U.S., including Alaska, Hawaii, U.S. Territories, and all Canadian Provinces
- (4) The external housing and cosmetic parts shall be free of major defects at the time of shipment and, therefore, shall not be covered under these limited warranty terms.
- (5) Upon request from LG, the consumer must provide information satisfactory to LG to prove the date of purchase or exchange.

(6) The customer shall bear the cost of shipping the product to the Customer Service Department of LG. LG shall bear the cost of shipping the product back to the consumer after the completion of service under this limited warranty.

2 WHAT THIS WARRANTY DOES NOT COVER-

- (1) Defects or damage resulting from use of the product in other than its normal and customary manner.
- (2) Defect or damage from abnormal use, abnormal conditions, improper storage, exposure to moisture or dampness, unauthorized modifications, unauthorized connections, unauthorized repair, misuse, neglect, abuse, accident, alteration, improper installation, or other acts which are not the fault of LG, including damage caused by shipping, blown fuses, or spills of food or liquid.
- (3) Breakage or damage to antennas unless caused directly by defects in material or workmanship.
- (4) Alleged defects or malfunctions of the product if the Customer Service Department at LG was not notified by the consumer during the applicable limited warranty period.
- (5) Products which have had the serial number removed or made illegible.

- (6) This limited warranty is in lieu of all other warranties, express or implied either in fact or by operations of law, statutory or otherwise, including but not limited to any implied warranty of marketability merchantability or fitness for a particular use.
- (7) Damage resulting from use of non-LG approved accessories.
- (8) All plastic surfaces and all other externally exposed parts that are scratched or damaged due to normal customer use.
- (9) Products operated outside published maximum ratings.
- (10) Products used or obtained in a rental program.
- (11) Consumables (such as fuses).

3. STATE LAW RIGHTS:

No other express warranty is applicable to this product. The Duration of any implied warranties, including the implied warranty of marketability or merchantability, is limited to the duration of the express warranty herein. Lge mobilecomm usa inc. Shall not be liable for the loss of the use of the product, inconvenience, loss or any other damages, direct or consequential, arising

OUT OF THE USE OF, OR INABILITY TO USE, THIS PRODUCT OR FOR ANY BREACH OF ANY EXPRESS OR IMPLIED WARRANTY, INCLUDING THE IMPLIED WARRANTY OF MARKETABILITY OR MERCHANTABILITY APPLICABLE TO THIS PRODUCT.

Some states do not allow the exclusion of limitation of incidental or consequential damages or limitations on how long an implied warranty lasts; so these limitations or exclusions may not apply to you. This warranty gives you specific legal rights and you may also have other rights, which vary from state to state.

4. HOW TO GET WARRANTY SERVICE:

To obtain warranty service, please call the following telephone number from anywhere in the continental United States:

LG Flectronics Service

201 James Record Road

Huntsville, AL 35824

Tel. 1-800-793-8896 Email: http://us.lgservice.com

Please call or write for the location of the LGE authorized service center nearest you and the procedures for obtaining warranty claims.
